

A BREAKTHROUGH IN AMD

**Meso-Zeaxanthin (MZ) is the key carotenoid in the fight
against AMD3**

Macular drusen in the left eye of a 66 year old
Caucasian male.

Resolution of drusen centrally in the left eye following
supplementation with Macuhealth™ LMZ3
(12 months later)

FACTS:

- ❏ MZ is naturally found in serum and at the very center of the macula (the most sensitive and vulnerable tissue), where it is the dominant macular protective pigment.
- ❏ Supplementation with Macuhealth-LMZ3 has been proven to significantly increase serum concentrations of macular protective carotenoid pigments.
- ❏ Supplementation with Macuhealth-LMZ3 has been proven to significantly increase macular pigment density (MPD).
- ❏ Independent studies have proven the ability of an MZ supplement to rebuild central MPD in subjects found to have an atypical MPD profile at baseline.
- ❏ Subjects with an atypical MPD profile improved to a more typical MPD profile (central peak) after eight weeks of supplementation with Macuhealth-LMZ3.
